

OKNexus Exchange

Platform providers & API setup guide

Prepared for Mr Sam Soair · 14 July 2026 · Every service the platform needs — purpose, requirements, cost, and how to get it

OKNexus is a custodial exchange built on enterprise infrastructure. This guide lists every external service the platform depends on and, for each one, its **purpose**, what it **replaces** in the current build, its **requirements**, its **cost**, the **method of getting it**, and **who does it**.

Two practical rules before you start.

1. Open every account under a **company-owned email** (e.g. an @oknexus address), not a personal one — these become the production accounts that hold the contracts and, for the ramps and swaps, receive revenue.
2. Work splits into two tracks that run in parallel: a **developer track** (free sandbox sign-ups, integration) and a **client track** (company verification, contracts, and the licence). Neither blocks the other.

At a glance

Service	Purpose	Cost model	Signs up	When
Fireblocks	Custody & wallets (holds keys)	Quote (~\$15k–\$100k+/yr)	Client	Before launch
Sumsb	Identity KYC + AML screening	\$149–\$299/mo + per-check	You → Client KYB	Now (sandbox)
Chainalysis	On-chain AML (wallet screening)	Quote (~\$18k–\$200k/yr)	Client	Before launch
MoonPay	Fiat ramp — international	Free; you earn markup	You → Client KYB	Now (sandbox)
Bitnob	Fiat ramp — Africa / NGN	Free	You → Client KYB	Now (sandbox)
Liquidity provider	Spot market & matching	\$8k–\$50k setup + ~0.4%/trade	Client	Before launch
Swap API (0x / Changelly)	Instant swap / convert	Free; you earn markup	You	Now
SEC VASP licence	Legal authorisation to operate	₦30M + ₦2bn capital	Client + lawyers	Before launch

Enterprise prices (Fireblocks, Chainalysis, liquidity) are quote-based and indicative only — confirm directly with each vendor. "You" = developer can start now; "Client" = company officer must complete verification / sign.

The providers

Fireblocks		CUSTODY & WALLETS
Purpose	Securely holds customer crypto and private keys using MPC (no single key exists anywhere), signs and broadcasts every on-chain deposit and withdrawal, and manages the hot / warm / cold separation and approval policy. The licensed vault layer of the exchange.	
Replaces	Our self-built HD wallets, chain adapters, deposit scanner and withdrawal signer (keys currently derived on our server). The ledger, wallet screens and deposit/withdraw flow stay — driven by Fireblocks webhooks instead.	
Requirements	Registered company; full KYB; ultimate-beneficial-owner disclosure; AML policy; typically evidence of regulatory/licensing status; enterprise sales cycle. Budget several weeks of technical onboarding.	
Cost	Quote-based (not public). Reported intro ~US\$699/month for the first 6 months; enterprise plans commonly estimated US\$15,000–US\$100,000+/year by volume and assets. Per-transaction fees on top. Confirm with sales.	
How to get it	1. Request a demo / contact sales at fireblocks.com. 2. Account review (fit + risk). 3. Complete KYB and sign the commercial agreement. 4. Receive sandbox workspace + API keys. 5. Configure vaults + Transaction Authorisation Policy. 6. Go-live review → production keys.	
Who does it	Client signs KYB + contract. Developer requests the demo and integrates the sandbox once granted.	

Sumsb		IDENTITY KYC + AML SCREENING
Purpose	Verifies customer identity — government ID, selfie / liveness, proof of address — and screens each person against sanctions / PEP watchlists with ongoing re-screening. Covers Nigeria (NIN, BVN, and document-free Non-Doc verification) <i>and</i> international users (14,000+ document types across 220+ countries).	
Replaces	Our manual KYC form + admin eyeball review. The status-tracking and feature-gating layer stays; ID documents move into Sumsb's vault, so we stop storing passport scans ourselves (a liability we want to shed).	
Requirements	Company KYB for production; a signup is enough for the sandbox/trial. Integrate the Sumsb WebSDK on the frontend + a webhook on the backend.	
Cost	Basic US\$1.35/verification, US\$149/month minimum. Compliance tier (adds AML + ongoing monitoring — the tier you want) US\$1.85/verification, US\$299/month minimum. Nigeria NIN/BVN database lookups may be per-check add-ons — itemise at contract. 14-day free trial + 50 free checks.	
How to get it	1. Sign up for the free trial at sumsub.com (company email). 2. Configure two verification levels — a Nigeria level and an international level. 3. Get sandbox API keys → integrate. 4. Complete company KYB + select the Compliance tier. 5. Production keys → go live.	
Who does it	You open the trial and we build now; Client completes KYB + tier selection for launch.	

Chainalysis ON-CHAIN AML — TRANSACTION MONITORING (KYT)	
Purpose	Screens crypto <i>wallet addresses and transactions</i> for sanctions exposure, mixers, stolen funds and other illicit activity — the on-chain half of compliance. Different from Sumsb, which screens the <i>person</i> ; this watches the <i>money</i> . Runs on every deposit and withdrawal.
Replaces	Nothing yet — a new capability. Slots into the deposit + withdrawal flow as an automated screening step.
Requirements	Company KYB; enterprise sales cycle.
Cost	Quote-based. Plans commonly cited US\$50,000–US\$200,000/year; smaller customers reported ~US\$18,500/year. Multi-year contracts discount 15–30%. Confirm with sales.
How to get it	1. Contact Chainalysis sales / request a demo. 2. Scoping + quote (product: KYT for monitoring). 3. KYB + contract. 4. API keys → integrate screening into the money flow.
Who does it	Client signs the contract. Developer integrates.

MoonPay FIAT ON/OFF-RAMP — INTERNATIONAL	
Purpose	Lets users buy crypto with cards / bank transfers and cash out to fiat across international markets. Handles the fiat rails, card processing and related compliance.
Replaces	Our simulated "Buy / Sell" ramp → real fiat settlement for international users.
Requirements	Account Review (business fit) + KYB. KYB documents must be director-signed, dated within 12 months, and in English (certified translation otherwise).
Cost	No subscription and no integration fee (paywall removed April 2026). You set your own markup on top of MoonPay's fee — a revenue line, not a cost .
How to get it	1. Create a partner account at moonpay.com/business. 2. Pass Account Review. 3. Complete KYB. 4. Select supported currencies + set your fee. 5. Activate → go live.
Who does it	You open the partner/sandbox account; Client completes KYB. Confirm MoonPay's appetite for a Nigeria-domiciled exchange during Account Review.

Bitnob		FIAT ON/OFF-RAMP — AFRICA / NGN
Purpose	Naira and pan-African fiat on/off-ramp, wallets-as-a-service, stablecoin settlement and payouts — the natural primary rail for domestic Nigerian users, complementing MoonPay for international.	
Replaces	Our simulated ramp for NGN / African users.	
Requirements	KYB (Know Your Business). Use the Bitnob Business (managed) product — note that Bitnob Enterprise is non-custodial.	
Cost	Free to access (Business & Enterprise). Revenue via your markup / fees.	
How to get it	1. Sign up for Bitnob Business. 2. Complete KYB. 3. Receive API keys → integrate.	
Who does it	You can start; Client completes KYB.	

Liquidity provider		SPOT MARKET & MATCHING
Purpose	Supplies the deep buy/sell liquidity and price feed behind spot trading, so orders fill at real market prices rather than a simulated book. Candidates: B2C2, Wintermute, Cumberland (institutional LPs) or B2Broker (prime-of-prime + white-label).	
Replaces	Our live-price + demo matching → real order execution.	
Requirements	Institutional onboarding + company KYB; often a funded account or minimum-volume commitment.	
Cost	Integration / white-label setup commonly US\$8,000–US\$50,000+ (enterprise up to ~US\$250,000); revenue-share from ~0.4%/transaction, or built into spreads. Confirm per provider.	
How to get it	1. Contact the LP's sales. 2. Institutional onboarding + KYB. 3. Commercial agreement + fund the account. 4. Integrate the liquidity API (or white-label).	
Who does it	Client handles commercial + funding. Developer integrates the API.	

Swap API — 0x or Changelly		INSTANT SWAP / CONVERT
Purpose	Powers one-tap asset-to-asset swaps at a quoted rate. 0x routes on-chain / DEX liquidity; Changelly offers cross-chain and custodial-style swaps.	
Replaces	Our internal Binance-priced swap → provider-quoted execution.	
Requirements	Light — a developer account / API key. Production payouts may need basic KYB.	
Cost	Free to integrate; you add a markup on each swap — a revenue line . (0x integrates in under a month; aggregators go live in 1–2 weeks.)	
How to get it	1. Register a developer account (0x.org or changelly.com/business). 2. Generate an API key. 3. Integrate + set your markup.	
Who does it	You — can be done now.	

SEC VASP / Digital Asset Exchange licence		REGULATORY — NIGERIA (ISA 2025)
Purpose	The legal authorisation to operate a custodial digital-asset exchange holding Nigerian customers' funds. Not an API — the licensing foundation the whole platform sits on.	
Requirements	Nigerian corporate registration; minimum capital; key management personnel resident in Nigeria; fidelity bonds / insurance; proof of solvency / reserves. An ARIP "Approval-in-Principle" transitional route is available.	
Cost	Registration fee ₦30,000,000 (~US\$20,000); minimum capital ₦2,000,000,000 (~US\$1.2–1.4M, FX-dependent). Compliance deadline 30 June 2027. This is the single largest cost / gating item — surface it early.	
How to get it	1. Engage Nigerian securities counsel. 2. Apply for ARIP / Approval-in-Principle. 3. Meet capital + personnel + bond requirements. 4. Full DAX registration.	
Who does it	Client + legal counsel. Not development work.	

The one-time KYB document pack

Nearly every provider above asks for the same company documents. Gather this pack **once** and reuse it for all of them:

- Certificate of Incorporation / business registration
- Memorandum & Articles / ownership structure, with ultimate beneficial owners (UBOs) and their IDs
- Director(s)' government-issued ID + proof of personal address
- Proof of company address (recent utility bill or bank statement)
- Written AML / CFT policy
- Company bank account details (for settlement / payouts)
- Website + a plain description of the product and business model
- Where applicable: source-of-funds evidence, and the SEC licence or proof of application

Format rules most providers share: documents dated within the last 12 months, signed by a director, in English (certified translation otherwise), submitted as original scans or photos.

Recommended order — this week

1. **Developer**: open the free accounts under a company email — Sumsb (trial), MoonPay, Bitnob, 0x/Changelly — and begin sandbox integration.
2. **Client**: assemble the KYB document pack above.
3. **Client**: start the enterprise conversations — Fireblocks, Chainalysis, a liquidity provider.
4. **Client + counsel**: engage Nigerian securities counsel on the SEC licence + capital.
5. **Developer (parallel)**: build account security (2FA + email/phone verification) and wire the sandbox integrations behind the existing interfaces, so we flip test → live the moment real keys arrive.

Cost summary

Item	One-time / setup	Recurring	Usage
Fireblocks	—	Quote (~\$15k–\$100k+/yr)	Per-transaction

Item	One-time / setup	Recurring	Usage
Sumsub	—	\$149–\$299/mo minimum	\$1.35–\$1.85 / verification
Chainalysis	—	Quote (~\$18k–\$200k/yr)	Volume tiers
MoonPay	—	None	Revenue (your markup)
Bitnob	—	None	Revenue (your markup)
Liquidity provider	\$8k–\$50k+	Revenue-share / spread	~0.4% / trade
Swap API	—	None	Revenue (your markup)
SEC licence	¥30M (~\$20k) + ¥2bn capital	Renewal / audit	—

Rough technology operating floor once live (excluding the licence and capital): ~US\$5,000–US\$15,000/month, driven mainly by the Fireblocks and Chainalysis tiers plus per-verification KYC. Four services — MoonPay, Bitnob, and the swap API — are free to integrate and generate revenue rather than cost. The dominant number by far is the regulatory capital requirement, which is a company-funding decision rather than a platform cost.

OKNexus Exchange — internal development & procurement guide. Provider names reflect the client's confirmed selections and are subject to commercial onboarding. Prices are indicative planning figures, not quotes, and must be confirmed with each vendor. Nothing in this document is legal, financial, or investment advice; obtain qualified counsel for licensing and capital requirements.
